

Getting started with SuperVision® 2.0 Control Module

— ensure your Gateway is updated

To ensure the control module can operate together with the SuperVision® 2.0 control system, your Gateway must be updated to the latest firmware version (the device's internal software). An upgrade of your Gateways are needed regardless of if you intend to use it with a Control module or not. It is needed to ensure continued performance, reliability, and compatibility with the latest SuperVision® services.

Corroventa's Control module is only compatible with the SuperVision® 2.0 Gateway (generation 2) and is therefore not compatible with the first generation of SuperVision®, which was discontinued from Corroventa's range in 2021. The easiest way to identify which version you have is via the label on the front of your Gateway, where it says **SuperVision® 2.0** for the compatible generation 2.

See marking in the image below.

Updating your Gateway is done automatically when it is connected to the internet. Please note that — depending on mobile network prioritization — it may take up to 24 hours before the update is completed.

We therefore ask you to connect all SuperVision® 2.0 Gateway units as soon as possible to ensure they are updated to the latest firmware version.

How to connect your Gateway

Connecting the device is simple — you do not need to create any network or make any settings.

1. Connect the Gateway to:
 - a powered ES machine from Corroventa via system cable, or
 - a SuperVision® 2.0 power adapter from Corroventa

2. Wait until the LED indicators activate:

- The device starts (lights turn on)
- When **Data COM** shows a solid green light, the Gateway is connected to the internet. Firmware is then updated automatically within 24 hours. *See marking in the image below.*

Summary

- Ensure you have a SuperVision® 2.0 Gateway (generation 2).
- Connect all Gateway units that are not already connected to projects as soon as possible and keep them connected for at least 24 hours.
- Updates are carried out automatically within 24 hours when the device is connected to the internet.
